

WEBINAR:

Future focus - robotics and intelligent systems in Australian vegetable production systems

National Vegetable
Extension Network

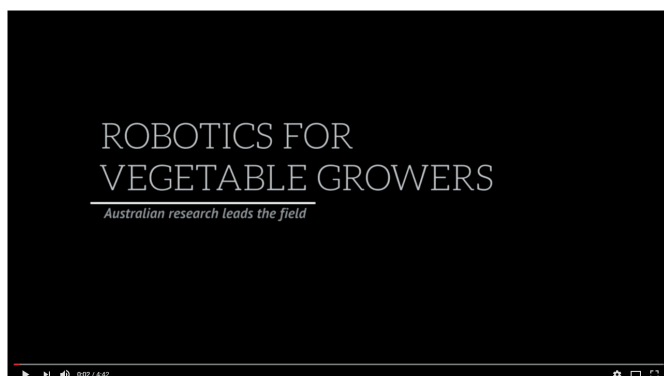

Robotics and intelligent systems are used throughout various agricultural industries to control, monitor and improve farming systems. The development of various systems to aid in increasing the economic performance of farms is prevalent in both Australia and internationally.

Join this informative and interactive one-hour lunchtime session to get the latest updates from leaders in the field of robotics and intelligent systems.

Video to watch before the webinar:

You can watch a video with leaders in the field of robotics demonstrating the latest developments in robotics for vegetable producers.

DETAILS

DATE:
Thursday August 23, 2018

TIME:
12:30PM – 1:30PM AEST

REGISTER:
[CLICK HERE](#) to register

SPEAKERS:

- Justin Clarke (ACFR, University of Sydney)
- David Carey (QDAF)
- Tim Neale (DataFarming)
- **FACILITATOR:** Carl Larsen (RMCG)

ON THE DAY:
Once registered, you will receive an email with a phone number to dial or click the link in the email and join in on your computer with a headset.
