

Managing irrigation requirements over the Victorian summer

Using soil moisture technology to inform decisions

National Vegetable
Extension Network

VICTORIA - NORTHERN,
WESTERN & SOUTH EASTERN

As the weather continues to warm up across the state, plant irrigation requirements also continue to increase.

Having a good understanding of where your soil moisture is up to has the ability to protect against heat stress and increase plant productivity.

In this short webinar we'll hear from **Dr Kelvin Montagu (AHR)**, from the Soil Wealth and Integrated Crop Protection team, on what's needed to accurately monitor soil moisture and how this information can be used to benefit your irrigation practices.
